

School of Computer Science and Artificial Intelligence

Lab Assignment # 7.2

Program : B. Tech (CSE)
Specialization : -
Course Title : AI Assisted Coding
Course Code : 23CS002PC304
Semester : II
Academic Session : 2025-2026
Name of Student : P Abhinav
Enrollment No. : 2403A51L38
Batch No. : 52
Date : 30/01/26

Submission Starts here**Screenshots:****Task 1 – Runtime Error Due to Invalid Input Type****(Buggy Code):**

```
num = input("Enter a number: ")
result = num + 10
print(result)
```

The screenshot shows a Jupyter Notebook cell with the following code:

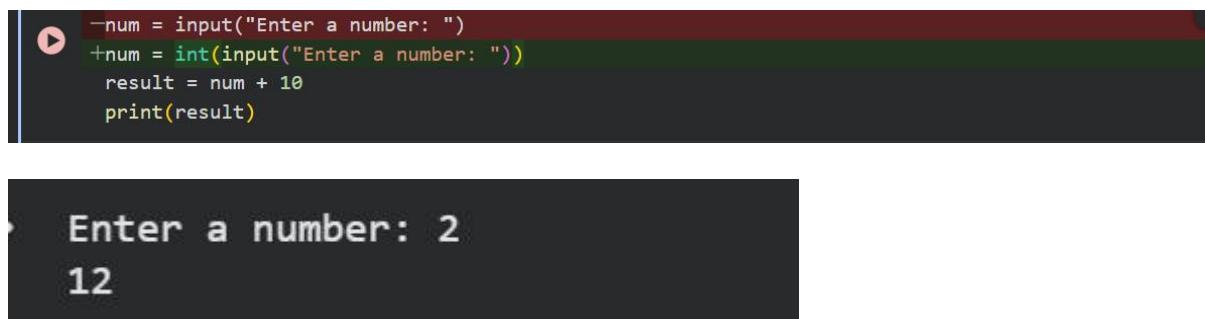

```
[1]
① 5s
▶  num = input("Enter a number: ")
    result = num + 10
    print(result)

▼ ... Enter a number: 2
-----
TypeError                                     Traceback (most recent call last)
/tmp/ipython-input-1898169331.py in <cell line: 0>()
      1 num = input("Enter a number: ")
      2 result = num + 10
      3 print(result)

TypeError: can only concatenate str (not "int") to str
```

Next steps: Explain error

Output:

The screenshot shows a Jupyter Notebook cell with the following corrected code:

```
▶ -num = input("Enter a number: ")
+num = int(input("Enter a number: "))
    result = num + 10
    print(result)
```

The output of the cell is:

```
Enter a number: 2
12
```

Task 2 – Incorrect Function Return Value

(Buggy Code):

```
def square(n):  
    result = n * n
```

The screenshot shows an IDE interface with a dark theme. A code editor window displays the following Python code:

```
def square(n):  
    result = n * n  
...     File "/tmp/ipython-input-3910404483.py", line 2  
          result = n * n  
          ^  
IndentationError: expected an indented block after function definition on line 1
```

Below the code editor, a message says "Next steps: Explain error".

Output:

The screenshot shows an IDE interface with a dark theme. A code editor window displays the corrected Python code:

```
[10]  def square(n):  
      result = n * n
```

Below the code editor, a terminal window shows the output of the code execution:

```
[10]  0s  ⏪  def square(n):  
      result = n * n
```

Task 3 – IndexError in List Traversal

(Buggy Code):

```
numbers = [10, 20, 30]  
for i in range(0, len(numbers)+1):  
    print(numbers[i])
```

The screenshot shows an IDE interface with a dark theme. A code editor window displays the following Python code:

```
[11]  numbers = [10, 20, 30]  
      for i in range(0, len(numbers)+1):  
          print(numbers[i])  
...     File "/tmp/ipython-input-726334973.py", line 3  
          print(numbers[i])  
          ^  
IndentationError: expected an indented block after 'for' statement on line 2
```

Below the code editor, a message says "Next steps: Explain error".

Output:

The screenshot shows an IDE interface with a dark theme. A code editor window displays the corrected Python code:

```
[1]  numbers = [10, 20, 30]  
      for i in range(0, len(numbers)+1):  
          print(numbers[i])  
+for i in range(len(numbers)):  
+    print(numbers[i])
```

Below the code editor, a terminal window shows the output of the code execution:

```
[1]  ...  10  
      20  
      30
```

Task 4 – Uninitialized Variable Usage

(Buggy Code):

```
if True:  
    pass  
    print(total)
```

The screenshot shows a code editor window with the following code:

```
[13] 0s  
if True:  
    pass  
    print(total)  
  
...   File "/tmp/ipython-input-1170978020.py", line 2  
        pass  
        ^  
IndentationError: expected an indented block after 'if' statement on line 1
```

Below the code, there is a button labeled "Next steps: Explain error".

Output:

The screenshot shows a code editor window with the following code:

```
[13] Gemini  
if True:  
    pass  
    + pass  
    print(total)  
-  
  
[13] Gemini  
if True:  
    pass  
+total = 0 # Or any other initial value  
print(total)
```

Below the code, the output is shown as "... 0".

Task 5 – Logical Error in Student Grading System

(Buggy Code):

```
marks = 85  
if marks >= 90:  
    grade = "A"  
elif marks >= 80:  
    grade = "C"  
else:  
    grade = "B"  
print(grade)
```

The screenshot shows a code editor interface with a dark theme. In the top left corner, there is a status bar with the number [16] and the text Os. The main area contains a Python script:

```
[16] Os
▶ marks = 85
if marks >= 90:
grade = "A"
elif marks >= 80:
grade = "C"
else:
grade = "B"
print(grade)

...
File "/tmp/ipython-input-2691675298.py", line 3
    grade = "A"
^
IndentationError: expected an indented block after 'if' statement on line 2
```

Below the code, there is a button labeled "Next steps: Explain error".

Output:

The screenshot shows a code editor interface with a dark theme. In the top left corner, there is a status bar with the text Gemini. The main area contains the same Python script as the previous screenshot, but the error has been fixed:

```
◀ Gemini
▶ marks = 85
if marks >= 90:
grade = "A"
elif marks >= 80:
grade = "C"
else:
grade = "B"
print(grade)

...
... C
```

The output below the code shows the result: C.
